

AHMET TARIK BOSTAN

Software Engineer

Ankara, Turkey | +90 506 221 18 03 | a.tarikbostan@gmail.com | www.atbostan.com

PROFESSIONAL SUMMARY

Software Engineer with 6+ years of experience building mission-critical systems in banking and aviation safety. Full-stack expertise across Java (Spring Boot), .NET Core, and React/Next.js, delivering end-to-end solutions in highly regulated environments. Proven record of leading legacy-to-modern transformation, integrating regulatory and central-bank APIs, and translating complex business requirements into reliable software. Comfortable owning products from architecture through deployment.

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, TypeScript, COBOL, SQL

Backend: Spring Boot, Spring Security, Spring Batch, .NET Core, .NET MVC, Node.js, REST APIs, Microservices

Frontend: React.js, Next.js, Angular, Tailwind CSS, Material UI

Databases: Oracle, IBM Db2, PostgreSQL, MS SQL, MongoDB

DevOps & Tools: Docker, WebSphere, Git

BI & Reporting: Qlik Sense

Domains: Core Banking, Open Banking, BDDK Regulatory Compliance, Aviation Safety, CMS

PROFESSIONAL EXPERIENCE

Software Engineer & Specialist, Safety & Quality Assurance | Turkish Airlines Jan 2025 – Present

- Developed frontend features and components in React for safeTHY, an internal safety-critical platform.
- Built backend services and REST APIs using .NET Core.
- Designed and implemented system integrations improving safety workflow efficiency and operational traceability.
- Developed structured data views and reporting layers in the Aviation Quality Database (AQD) safety management system.
- Built interactive dashboards and visualizations in Qlik Sense for safety monitoring and compliance reporting.
- Collaborated directly with stakeholders to translate operational safety requirements into technical solutions.

Technologies: React, .NET Core, Qlik Sense, AQD, Safety Systems

Software Engineer, Core Banking & Technology Transformation | Softtech (İş Bankası Group) Oct 2021 – Jan 2025

- Led transformation of mainframe COBOL screens and workflows into modern .NET and proprietary-framework architectures.
- Independently developed Regular Savings Instruction screens and end-to-end flows deployed on İşÇep mobile banking and İş Bankası Internet Banking.
- Migrated legacy Java services to a Spring Boot microservice architecture, including Virtual IBAN generation and account opening/closing processes.
- Developed and maintained COBOL core banking programs for taxation and fund transfer (virman) operations.
- Delivered new features on Java backend systems running on WebSphere application servers.
- Contributed to Currency-Protected Deposit (Kur Korumalı Mevduat) implementation integrated with Central Bank (TCMB) APIs across branch, web service, and digital channels.
- Redesigned and rebuilt contract-generation systems for account opening across all channels to meet BDDK regulatory directives.
- Implemented open banking features enabling users to view external bank accounts within İşÇep and Internet Banking.

Technologies: Java, Spring Boot, .NET, COBOL, WebSphere, Oracle, Db2, Open Banking, TCMB API

Software Engineer, CMS & Enterprise Web Solutions | Magiclik Digital Solutions Jun 2021 – Oct 2021

- Developed CMS solutions using .NET and .NET Core for real client production projects, including OPET corporate pages and Medipol University & Hospital institutional pages.
- Delivered CMS-driven architectures with content fully managed through admin panels; implemented enhancements and bug fixes on production web applications.

Technologies: .NET, .NET Core, CMS, Admin Panel

Full Stack Software Engineer | Business Intelligence Bridge

Mar 2020 – Jun 2021

- Independently designed and built an end-to-end online examination platform with student tracking and agenda management for mid-sized educational institutions.

- Owned the full product lifecycle: system design, backend and frontend development, database design, and Docker-based deployment.
- Contributed multiple system modules to NACORAC, a NATO-related flagship project in a security-sensitive enterprise environment.

Technologies: Angular, .NET Core, PostgreSQL, MySQL, Docker

SELECTED PROJECTS

Aviation Safety Intelligence Platform (personal)

- Building a full-stack platform that ingests multi-source aviation safety data (regulators, accident boards, incident databases, manufacturers) and applies an AI pipeline for summarization, classification, and translation.
- Architected a multi-source collector (RSS, HTTP scraping, headless browser, direct APIs) with a separate historical backfill scraper; ~99 curated real-world sources.
- Frontend in React/Next.js; storage on PostgreSQL with pgvector; job queuing via BullMQ/Redis. Explored FDR/CVR decoding using ARINC 573/717/767 standards.

Technologies: Next.js, React, TypeScript, PostgreSQL, pgvector, BullMQ, Redis, Python

committed.app — CMS product (startup initiative)

- Built a full CMS product using Next.js as a live startup initiative.

Technologies: Next.js

EDUCATION

M.Sc. in Software Engineering, Hacettepe University

B.Sc. in Statistics, Ankara University
